

EweManage Mobile PC Installation steps on a windows tablet

(Applies to tablets, PC or laptops, windows 8 and above)

Prerequisite : you tablet must be equipped with Java 32 bits

Step 1)

Download the full program from the ewemanage.com site. You will obtain a compressed (zipped) folder that you will copy (or move) to your desktop

Step 2)

Uncompress the file : Right click on the folder and select « extract »

C:\Users\Jacques-PC\Desktop\mobile_PC

Erase the end of the path to extract files on your desktop as in the following picture :

C:\Users\Jacques-PC\Desktop|

Once extracted, you will end up with the folder as follows. You may delete the .zip file as you will no longer need it

Step 3) : Prepare files of the EweManage software(running on your PC) to be transferred to your mobile application.

In order for your mobile application to function properly, you must first import the EweManage data into it. This again is a three step process : First, create files that contains data, second transfer these files to the « Transaction » folder of your tablet, and finally, import the data into the mobile_PC application.

3-1 : Prepare files in Ewemanage. In your EweManage software, click on the « Readers / tools » button, then access the Mobile PC screens :

Initial configuration : You will have to define the location where the files will be created by clicking on the « Browse » button and selecting the location. Here, we selected Bergèremobile_E as the target folder. You have to set this up only once.

Hint : you may want to use an external USB key (or a folder on the « cloud » accessible both by your PC running EweManage and the tablet running the mobile application) as your location. This way, you will be able to have the EweManage files created directly on that key, and the location will be used later to import transactions from the mobile, all at once. Otherwise, you have to transfer files either via copy on a key or any other media.

To create files containing the data to export to the mobile application, simply click on the « Export all » button and select the Windows type files

Wait for three messages confirming the preparation of various data files located in the Mobile_PC folder created on your tablet in step 2) above.

In the directory you have selected above, you will find 9 .CSV type files. You need to copy all these to the exception of the files starting by B_mobile (highlighted in light blue below) to the Transactions folder of the tablet

Files created in your PC from EweManage

Nom	Modifié le	Type	Taille
medicaments.csv	2018-03-07 13:09	Fichier CSV	2 Ko
maladies.csv	2018-03-07 13:09	Fichier CSV	1 Ko
donnees.csv	2018-03-07 13:09	Fichier CSV	3 150 Ko
B_mobile.csv	2018-03-07 13:08	Fichier CSV	1 671 Ko
B_mobile_ag.csv	2018-03-07 13:08	Fichier CSV	1 263 Ko
causes_mort.csv	2018-03-07 13:08	Fichier CSV	1 Ko
groupe.csv	2018-03-07 13:08	Fichier CSV	2 Ko
races.csv	2018-03-07 13:08	Fichier CSV	1 Ko
sites.csv	2018-03-07 13:08	Fichier CSV	1 Ko

Files once copied to the Transactions folder in your mobile

Nom	Modifié le	Type	Taille
causes_mort.csv	2018-03-07 13:08	Fichier CSV	1 Ko
donnees.csv	2018-03-07 13:09	Fichier CSV	3 150 Ko
groupe.csv	2018-03-07 13:08	Fichier CSV	2 Ko
maladies.csv	2018-03-07 13:09	Fichier CSV	1 Ko
medicaments.csv	2018-03-07 13:09	Fichier CSV	2 Ko
races.csv	2018-03-07 13:08	Fichier CSV	1 Ko
sites.csv	2018-03-07 13:08	Fichier CSV	1 Ko

3-3 : Import the data in your mobile application.

In the Mobile_PC folder, identify the Mobile_PC application (or .exe file) that will run the program. Do not confuse with the Mobile_PC.fmpur which is the database file that will contain your data.

Nom	Modifié le	Type
mobile_PC.exe	2017-09-11 11:22	Application
mobile_PC.fmpur	2018-03-07 13:08	Fichier CSV
msvcp110.dll	2012-07-26 19:08	Extension de l...

This is the exe file that starts the application. You may create a « shortcut » and place it on your desktop for easy access

Hint : you may create a shortcut of the Mobile_PC.exe file to put on your desktop for faster access later on.

On opening, you will get a bilingual message stating that it is your first activation and you must import data from EweManage. Click « OK »

Then click on « Import All » to import the data contained in the files you have just copied in the « Transactions » folder.

The system will ask you to export transactions if you have any. Simply click OK since this is your first activation and obviously you do not have transactions yet.

Once imported, the systems ask to confirm your language.

Note : to change language, click on the « ? » button left hand corner...

You will have to reimport data regularly into your mobile application in order to update everything to the current information of your main database : EweManage. Simply repeat step 3) above.

You may also want to import only part of the information. In the Mobile_PC screen of EweManage, you may opt to create only certain files using the button titled « Select items to export » and use the appropriate import button at the bottom of the screen.

The content of the import files shown above is as follows :

FileName	Content
Causes_mort.csv (Death causes)	Contains the list of causes of death . This list may be adjustable in EweManage in the Flock disposal panel
Donnees.csv (Animals)	This file contains all « Active » animals of your flock with the appropriate data. Active animal are all those in a group different from « 0 »
Groupe.csv (Groups)	Contains the list of all your group names used in EweManage
Maladies.csv (Diseases)	This file contains the name of all diseases you have defined in the health section of EweManage
Medicaments.csv (Medications)	This file contains the list of all medications defined in your pharmacy, along with withdrawal periods, dosage and mode of administration for each one
Races.csv (Breeds)	This file contains the values of the Breed types in EweManage
Sites.csv (Premises ID)	This file contains the Premises ID numbers you are using and you have defined in the « farm profile » of Ewemanage
